The Depts. of Anthropology and Earth Sciences at IUPUI and the Indiana Geological Survey and Dept. of Geological Sciences at Indiana University-Bloomington are pleased to offer the third year of their National Science Foundation Research Experiences for Undergraduates (REU) program. This eight-week program in June and July of 2015 will include four weeks of fieldwork that will examine the archaeological correlates of warfare and demographic change at a Mississippian-era (AD 1050-1450) village located in the central Illinois River valley. Building upon the research conducted during Years 1 and 2 of the REU, Year 3 participants can anticipate examining the spatial and temporal relationships of demographic change and warfare on the Prairie Plains of west-central Illinois with climate & environmental factors, regional settlement patterns, subsistence practices & diversity, and the ecological impacts of agriculture to landscapes. For more information on the site & this REU’s educational programming, go to: https://www.indiana.edu/~angelreu/cms/
